DAVID ABIOLA SHODEINDE

BACKEND ENGINEER | PYTHON | DJANGO | DJANGO REST FRAMEWORK | FASTAPI

Lagos, Nigeria | +234 704 548 9883 | abiolad267@gmail.com | LinkedIn: linkedin.com/in/abiola-david-2b5319252
GitHub: github.com/DaveTech683 | Portfolio: www.techdv.vercel.app

PROFESSIONAL SUMMARY

Backend Engineer specializing in Python, Django, Django REST Framework and FastAPI. Experience building RESTful APIs, relational database structures and e-commerce backends; leading a four-developer team on a unified software platform; and deploying a FastAPI backend on Railway with Cloudflare Stream for video delivery.

CORE COMPETENCIES

Programming Languages: Python, SQL, JavaScript
Backend Frameworks: Django, Django REST Framework, FastAPI, Pydantic
API Development: RESTful API Design, API Integration, Authentication
Databases: PostgreSQL, MySQL, Database Schema Design, Database Migrations
Cloud & Deployment: Railway, Cloudflare (Stream), Supabase, Vercel
Tools & Practices: Git, Application Deployment, Application Maintenance
Frontend Collaboration: React Native, Expo, Next.js, HTML, CSS, JavaScript

PROFESSIONAL EXPERIENCE

Lead Backend Developer | ECURMAS Remote | Feb 2025 – Jan 2026

- Led a team of four developers working across different programming languages, coordinating technical contributions and integration into a unified software platform.
- Developed backend functionality for an e-commerce infrastructure platform that provides reusable e-commerce APIs, enabling businesses and developers to build online stores without building backends from scratch.
- Implemented backend features within an existing product architecture, translating product requirements and architectural specifications into server-side components.
- Contributed to backend system design, API development and database integration supporting core e-commerce operations.
- Tracked implementation progress and supported integration across the engineering team.

Technical Stack: Python, FastAPI, PostgreSQL, RESTful APIs, Git

Full Stack Developer | Modest Daily Fashion Lagos, Nigeria | Mar 2024 – Jul 2026

- Designed and implemented the application architecture for an e-commerce website, establishing a structured foundation for maintainability and future expansion.
- Built the website end to end using Django, HTML, CSS and JavaScript, implementing customer-facing functionality and server-side logic.
- Designed and managed the MySQL database structure for product information, customer records and order management.
- Developed product browsing and discovery features for the online shopping experience.
- Maintained the application after deployment, shipping updates and resolving issues.

Technical Stack: Python, Django, MySQL, Next.js

Operations Team Member | Keskese Ltd (NYSC) Lagos, Nigeria | Mar 2026 – Present

- Coordinated project schedules, implementation timelines and operational dependencies to support project delivery.
- Prepared and consolidated project reports, maintained accurate records and communicated progress to stakeholders.

SELECTED PROJECTS

GoPremiere | Co-founder & Lead Backend Developer Independent project | 2025 – Present

- Building a gospel movie streaming platform with a React Native mobile app and a FastAPI backend, covering content discovery, user management and streaming functionality.
- Designing backend services, database structures and RESTful APIs connecting the mobile application to server-side infrastructure.
- Deploying the backend on Railway and delivering video content through Cloudflare Stream.

Technical Stack: Python, FastAPI, Pydantic, React Native, PostgreSQL, Railway, Cloudflare Stream, Git

Smart Attendance System | Developer Academic project | 2020 – 2023

- Developed a contactless attendance management system in Python, integrating smart card technology with an ACR card reader for attendance identification and data capture.
- Implemented application logic to process attendance data and handle interaction between the card reader and the software interface.
- Integrated hardware components with software to provide a streamlined attendance-recording process.

Technical Stack: Python, Smart Card Technology, ACR Card Reader, MySQL
